Public Space Revitalization in a Suburban Centre

3. Improvement ■ II. ■ Public Green

- A. Public centre
- B. Park
- C. Playground
- D. Sports
- E. Recreational centre
- F. Service centre

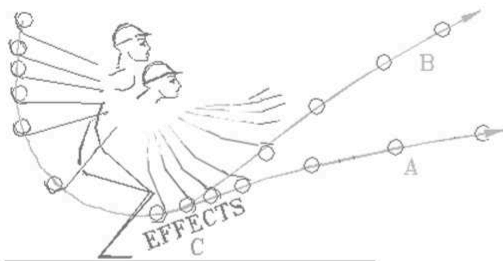

The town centre's public park is only a lawn covered area at present despite the fact that the surrounding apartment houses have been inhabited for nearly 40 years. On the up to this point single function green surface we have developed a playground, a sports and recreational area whilst keeping a significant surface as a biologically active area further as well. The sports courses are asphalt and plastic paved respectively, we have planned rubber brick paving under the playground equipment, the main promenades are paved with small element square stones, while the promenades of restplace park are sometimes paved with wider and sometimes narrower asphalt pavings. A wooden gang board paving leads towards the central water architecture.

We have placed rows of trees alongside the promenades of the main movement directions, the extensive lawn surfaces of the restpark are divided into parts by rows of trees planted in a trigonal system. In this part of the park the shrub level placement is less intensive than in the green surface dominant parts of the green square. We have planned annual surfaces only in the surroundings of the central water architecture.

The furnishings of the park are simple, modern park furnitures of mixed structure. An exception to this is the artificial stone „lazing place“ which is located in the middle of the deep green lawn surfaces.

A unique restpark furnishing is the pavilion of remembrance. The awning cover is held by a metal frame, among the pillar elements the portraits of famous citizens and their quotes can be seen on a shatter-proof corrugated plexi surface, with pondering chairs rotating below the pavilion.

We have received as a task the continuation of the forum actualized in the 1st schedule recently. For the meantime our concepts are ready on a sketch and study level, which we introduce here.
