

ENERGY SAVED IN TECTONICS

We tried not only to design a dress which looks appealing beside the Chevrolet Volt, we sought to recreate the whole concept of the car.

The main goal of course was to create perfect harmony between the dress and the car, but as there is so much more to say about this car than its shape, we tried to say all that with this outfit.

The chosen shape evokes the impression of energy as it has only recently come

to be thought of. Not only a resource to be used, but one which is to be treasured and preserved, it has become the ever-renewing essential of life itself.

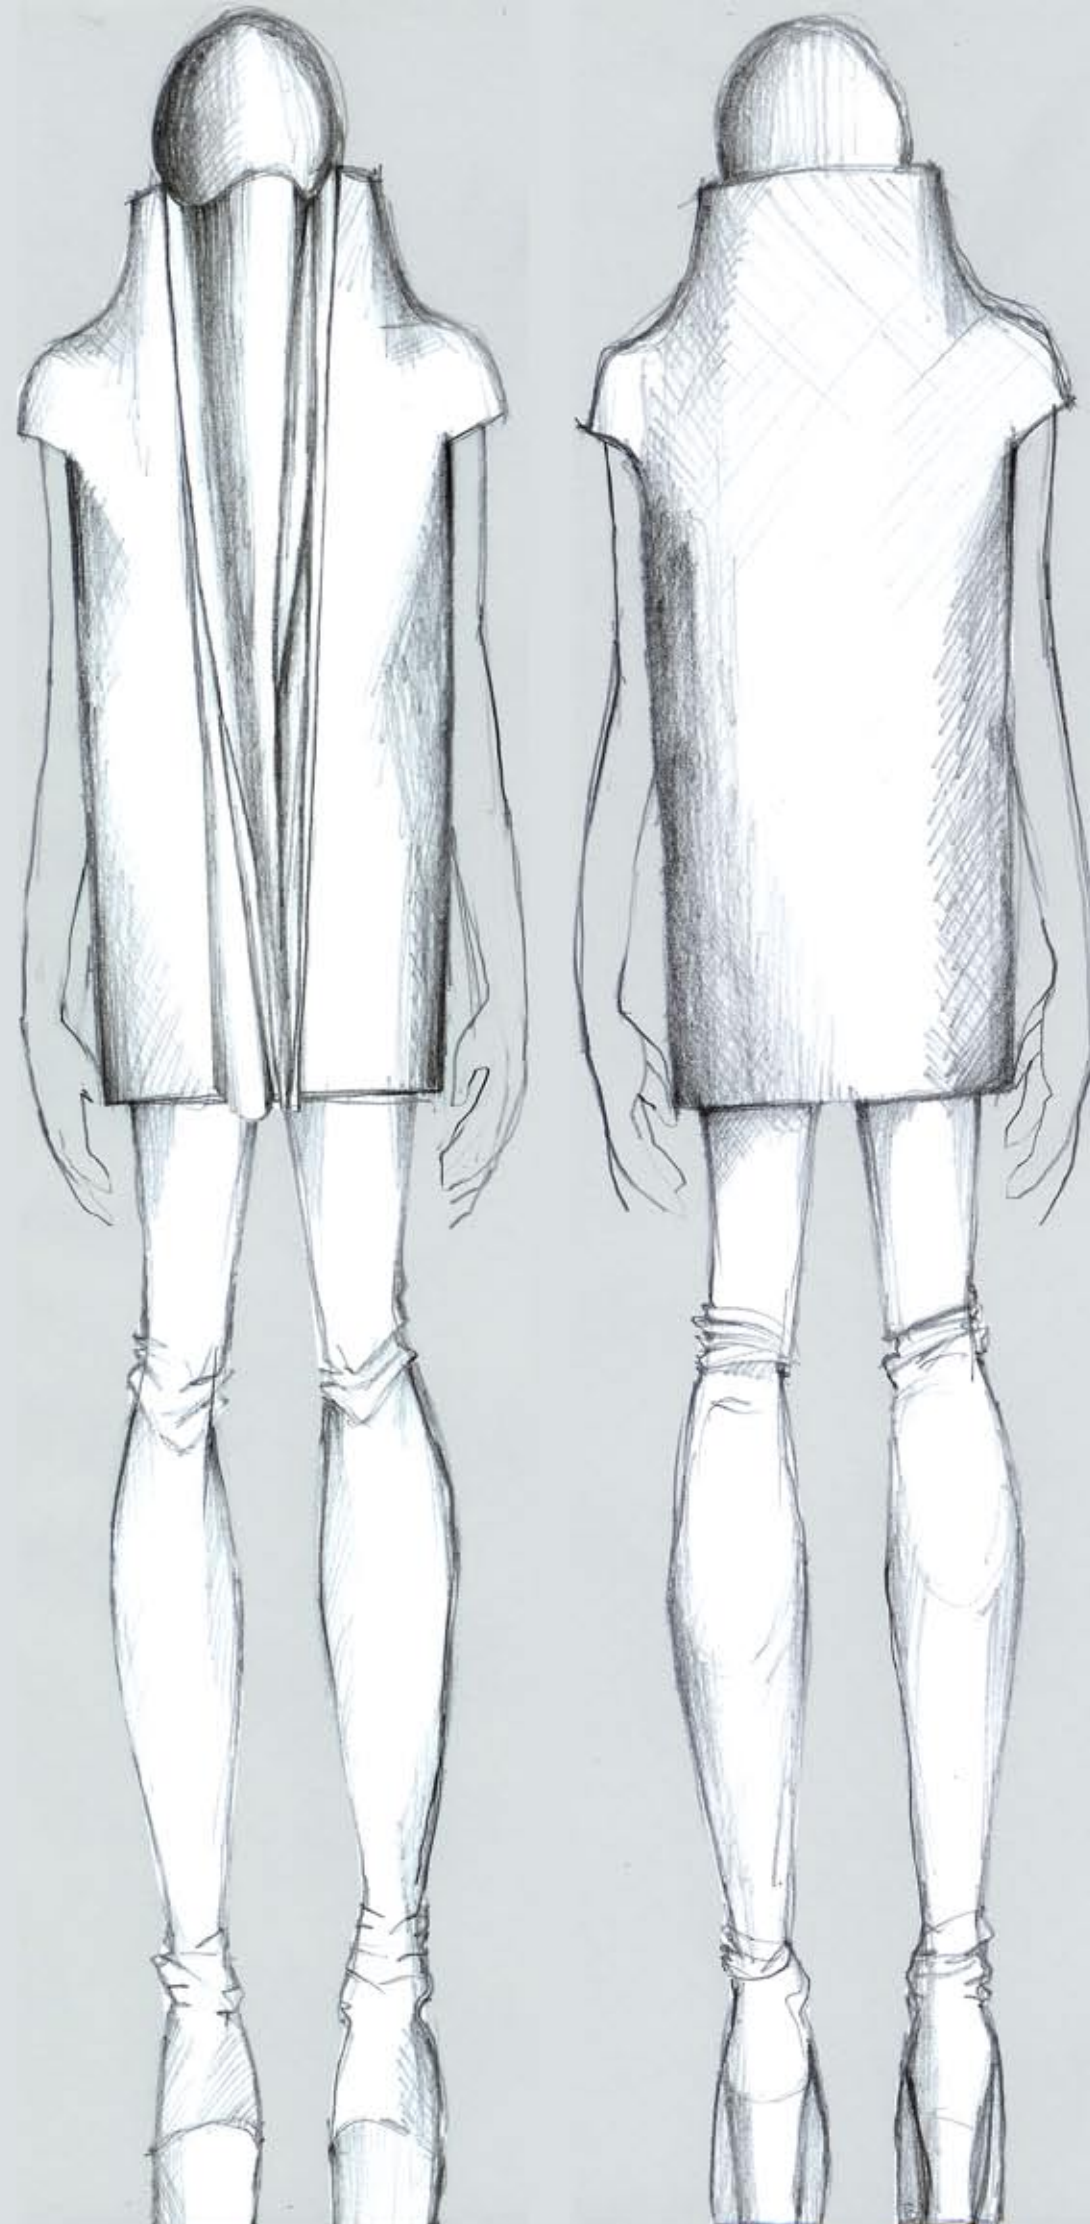

The purity of the white colour used, and the shape made of a hi-tech neoprene complements the masculine power the car exudes. The hostess wearing our sculpture-like dress, with its surface tension encapsulated in a streamlined outer shell, should serve as a contemporary nymph, an allegory of contained energy. From this standpoint, the female form is not a spectacle of sexuality, calling attention to the car it is next to, but inspires a subtle desire to control our human future.
